

Prakto Steel 10.5kg

The Prakto steel refillable gas bottle is a purpose designed refillable domestic gas bottle for the leisure camping market

When travelling abroad the bottle can be simply be refilled from the Autogas motorway service gas stations by the external point located at a convenient position on the side of the vehicle.

Available in the 10.5 kg size the cylinder is an ideal size for fitment to most European gas bottle storage locker lockers. Installed as a one or two bottle setup allows the user to simply be able to refuel or simply top up with LPG.

In the event the owner wishes to change the motorhome then the gas bottles can simply be removed and transferred to the new van with ease. Each bottle is fitted with a full set of safety valves to include an 80% overfill protection as well as unique excess flow valve on the off-take valve giving peace of mind for drive with gas turned on functions that are popular on many new motor-homes.

- **Cheaper to refill while travelling**
- **Offset gauge for accurate liquid level reading.**
- **Optional LED interior gauge**

The Prakto upright cylinder also incorporates a liquid level float activated clock gauge that is offset on the valve plate to give the most accurate reading available of the remaining liquid level contents inside the cylinder.

Gas Cylinder specification:

Water capacity: 26.3ltr
LPG working capacity: 10.5kg
Empty weight of LPG cylinder: 12.0kg
Height: 550mm
Diameter: 300
Specifications: EN1442 & PED 97/23/CE

Autogas in the UK is 90% Propane, however on the continent, a small amount of Butane is added. If you are already using Propane you can convert your existing regulator with a simple brass adapter that fits the Alugas offtake valve. For newer 2002 vans fitted with factory fitted 30mb regulators then simply change the pigtail to suit with one of the purpose designed pigtails to fit the Alugas cylinder.
